Caution Workwear Icons

Day Only

This icon designates clothing which meets AS/NZS 4602.1:2011 + Amendment No. 1 (November 2016) – Garments for high risk applications, **Day only use**. This standard specifies the design of garments including the minimum area of fluorescent or non-fluorescent background (compliant) materials present, including fabric, design and colours. We can provide a certificate of Conformance issued by an Independently Audited Laboratory for any product which has this Icon*.

Day/Night

This icon designates clothing which meets AS/NZS 4602.1:2011 + Amendment No. 1 (November 2016) – Garments for high risk applications, Day/Night use. This standard specifies the design of garments including the minimum area of fluorescent or nonfluorescent background (compliant) materials present, including fabric, Reflective Tape, design and colours. Garments with this Icon ensure visibility of the user in high risk applications under any light conditions by day and under illumination by vehicle headlights in the dark (24 hours visibility). We can provide a certificate of Conformance issued by an Independently Audited Laboratory for any product which has this Icon*.

NZFOA

This is an Industry standard for the NZ Commercial Forestry Industry, provided by the New Zealand Forestry Owners Association. Its requirements are lower in some areas than the AS/NZS4602.1, but it does state that any garments which comply with AS/NZS4602.1 are accepted for use. By this designation all our Hi Vis garments which meet AS/NZS4602.1 are suitable, and we classify them as compliant to the NZFOA standards. Day Only use is Classified by NZFOA as FID compliant and Day/Night Use is classified as FIDN. Full specifications of this standard can be accessed at https://www.nzfoa.org.nz/images/stories/pdfs/content/highviz/quidelinesdecember2012_web.pdf

TTMC-W17

This standard is a component of Part 8 of the Traffic Control Devices Manual (TCD Manual) Code of Practice for Temporary Traffic Management (CoPTTM). TTMC-W17 is the latest version and outlines the requirements for Garments to be used in activities covered by the CoPTTM. TTMC-W17 Garment certification while aligned with the AS/ NZS4602.1 standard, is more specific and requires additional design compliance and specific dimensions. Any area which falls under the following definition requires the use of TTMC-W17 compliant garments;

"The NZ Transport Agency's Code of practice for temporary traffic management (CoPTTM) describes best practice for the safe and efficient management and operation of temporary traffic management (TTM) on all roads in New Zealand.

Its application applies to any activity that varies the normal conditions of any road and applies to the total road reserve."

The above definition is taken directly from the current CoPTTM which can be accessed online at;

https://www.nzta.govt.nz/resources/code-temp-traffic-management

The specific Technical note relating to TTMC-W17 is available at; https://www.nzta.govt.nz/assets/resources/code-temp-traffic-management/docs/2017/Technical-Note-High-visibility-garments-CoPTTM-Section-B3-.pdf

^{*} These certificates cover design, not fabric colour. We usually show only one of the available colour options in style on the Design Certificate.

Caution Workwear Icons

UPF Rating

Products which have this Icon have had the Fabric tested to AS4399:1996 for its UPF rating. This is a rating based on the % of UV Radiation that can penetrate the clothing. It is known that over 90% of Skin cancers are caused by the cumulative effects of Sun Exposure. UPF rated clothing is an excellent option for Sun protection as it does not degrade over the day like other sun protection products. The rating is expressed as a number as per the table below;

UPF Rating	Protection Category	Effective UV Transmissions (%)
15, 20	Good	6.7 - 4.2
25, 30, 35	Very Good	4.1 - 2.6
40, 45, 50, 50+	Excellent	Less than 2.5

Water Proof

Garments which have this Icon have been tested for their waterproof properties in a Certified Laboratory using the Hydrostatic Head Pressure Test Method - AS 2001.2.17.

Hydrostatic Head (HH) is a way of measuring how waterproof a fabric is. The resulting measurement in millimetres relates to how high a column of water standing on the fabric would need to be before the water would penetrate the fabric. Traditionally the test is carried out using a physical column of water, but as fabrics have developed, the ratings were getting too high for this method. Therefore the test is done using a machine that replicates the downward pressure that a water column of such height would create. The machine increases the pressure of water that is pushed against the fabric until water is visible on the other side. The required level of pressure used to force water through the fabric is then converted into a measurement of how high the water column would have been. This provides the result of the Hydrostatic Head test in millimetres.

Breathable

Garments which have this Icon have been tested for their breathability in a Certified Laboratory using the Water Vapour transmission Test - ASTM E-96.

This test provides a rating for breathability, where the higher, the rating the higher the breathability of the garment. This gives the wearer a measure to compare garments, as traditional Rainwear had no or very low breathability while the more technical fabrics now available can provide higher breathability while still retaining a high Waterproof performance.

Lightweight

Any garments which have this Icon, are manufactured from a lighter weight fabric than most equivalent garments. They are great options for when Heat Fatigue is a factor in garment selection.

Caution Workwear Icons

Ventilated

Any Garments which have this Icon Incorporate mesh panel or Vents in the design to create additional Air Flow & cooling. These features are especially important in many Polyester garments as the Polyester fibres do not breath to the same level of natural fibres such as Cotton.

Moisture Wicking

Garments that have this Icon use fabrics which have moisture wicking Properties. This enables the transmission of perspiration away from the body more quickly, creating a cooler feel.

Ripstop Fabric

Garments using this Icon are mainly constructed from Ripstop Fabric.

Ripstop is the technique of weaving larger threads into a fabric in an intersecting pattern. The purpose of this is to create a fabric which, while lighter weight than regular fabric is either as strong or stronger due to the series of thicker threads. It also has a much higher resistance to tearing for its overall weight. Ripstop fabrics, when used in Workwear result in garments which are lighter, stronger and more durable than equivalent weight garments made from regular fabrics.

Zipped Pocket

This Icon designates our Garments which incorporate a Zipped Chest Pocket. These can take several shapes and positions (Including under the Stormflap on Waterproof garments), but all are designed with the Modern smartphone in mind. Generous space, coupled with a secure zip fastener to ensure your phone and all its valuable content, will not fall out and be destroyed during the course of your work.

King Sizes

Any garments which have this Icon are available in our additional King Sizes. These are sizes specifically designed to cater for the larger individuals who require a fully compliant garment with a great fit. For Polos, Polar Fleece & Shirts this is Sizes 9XL, 11XL & 13XL (Up to a 210cm Chest Measurement). In Overalls, this is Sizes 16 & 18 and in our Women's Fit range Sizes 24, 26 & 28.

CAUTION Oilskin Garment Introduction

OILSKIN FABRIC

The origins of Oilskin fabric can be traced back to the Sea. Sailors learnt that treating old cotton sails with linseed oil would produce a hard wearing weatherproof finish, long before the advent of synthetic waterproof fabric. Technology has moved on since these times and our Caution™ Oilskin fabric is now made from new 100% Cotton fabric, tightly woven, and treated with a special formulation of Oils & Waxes to provide a superior Water Resistance and Durability. They are sewn with a specially formulated thread which is non-wicking and also accepts the oil treatment to ensure a water resistant seam. Additionally, our range of Caution™ Hi Vis Oiskins have a Hi Vis outer layer sewn overtop of the regular Oilskin fabric. This is to ensure that the uncompromising performance and durability of the garment remains the same with an added benefit of AS/NZS4602.1 certified Performance & Visibility.

OUR UNIQUE FEATURES

Internal Zipped Cellphone pocket inside the Storm Flap

Generous sized cellphone pocket, conveniently located inside the storm flap for ease of access & Zipped to ensure safe storage of your phone.

Domed Storm Flap over the Main Zip

Storm flap ensures water cannot enter the main zipper and also allows the Hi Vis Oilskins to fully comply with the requirements of AS/NZS4602.1

Oilskin lined Anti-Sag tail

Instead of the fleece lining extending to the Bottom of the Tail, our Oilskin Vests & Jackets have Oilsin fabric for the inside lining of the Tail. This ensures that even as the Fleece lining stretches with age, it will not hang out the bottom of the garment. It also avoids the fleece lining getting wet when riding ATVs & Motorbikes.

OILSKIN CARE INSTRUCTIONS

When new a small amount of Oil from the Oilskin Waterproofing Process may remain on the surface of the Garment. This is normal and will disperse with natural use. To assist this process, you may rinse the garment manually in cold water and hang it to dry in a warm, well-ventilated place.

To Clean, either hang the garment and hose it down or rinse manually in Cold water. Any excess dirt can be removed carefully with a brush or damp cloth. Hang in a well-ventilated place to dry and to store. To ensure long-lasting performance periodically apply an Oilskin reproofing wax to the oilskin fabric & seams.

Sizes: 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 16

Colours:

Royal

Code: PCO3020

Poly Cotton Bib Overall

Overall Leg)

WORKWEAR ®

Features:

- · 250gsm polycotton fabric
- · Elastic-backed
- · Chest pockets with zipped cellphone pocket
- · Shoulder straps with plastic buckles
- · Two hanging trouser pockets
- · Back hip pocket
- · Two side entry openings
- · Internal adjustable knee pad pocket

Sizes: 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 16

Colours:

Royal

Poly Cotton Dustcoat

Features:

- · 250gsm polycotton fabric
- · Generous garment length
- · Chest pockets with zipped cellphone pocket
- · Concealed domed closure at front
- · Two hip pockets

Sizes: 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 16

Colours:

Royal

Code: PCO3040

Contoured Internal Knee Pads

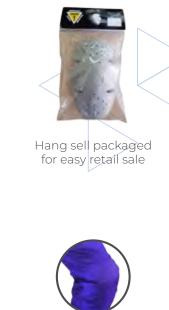

Features:

- · High-density foam construction
- Innovative design allowing maximum flexibility & comfort
- · Suits most internal knee pad pockets in both overalls & trousers

Sizes: OSFA

Colours:

One colour
